

12060 FLAT ROOF GUARDRAIL SYSTEM

FLAT ROOF GUARDRAIL #12060 FOR HORIZONTAL SURFACES

- Capable of multiple applications including flat roofs, metal roofs, parapets, skylights, stairwells, and rake edges on steep pitched roofs
- The U.S.A. Plate (Universal Shoe Adaptor part #12061) connects to virtually any mounting surface
- Plate can be screwed, bolted or welded and if necessary, left behind
- The Connector (part #12023) seats in holes in plate
- System comes complete with all 3 parts (individual components available as well)
- Maximum spacing 8' apart (used with construction grade lumber)
- Complies with OSHA regulations
- Powder coated safety yellow
- Made in America

In 2009 Acro introduced the Universal Guard Rail system model 12060 which targets low pitch roofs, including metal roofs. Unique to the system is the low profile attaching plate which is attached either by nails, bolts or screws. Even welding is an option. A connecting shoe and post are added to complete the system. Pre-cut 2 x 4 studs are used for cross rails. During removal, the attachment plate may be left on the building greatly reducing take down time. The low 1/2" profile is easily covered below the roof surface. Other applications when the safety rail is needed on top of an existing roof (skylights or stairwell); screws are easily removed during take down.
